Portfolio

EDUCATION

Indian Institute of Technology Roorkee (IIT Roorkee)

Bachelor of Technology (B.Tech) – Final Year

Roorkee, Uttarakhand

Sep. 2022 – May 2026

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C++, SQL

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Tailwind CSS

Databases & Caching: PostgreSQL, MongoDB, Redis, Kafka, BullMQ

DevOps & Cloud: Docker, Kubernetes, AWS, CI/CD

Concepts: REST APIs, WebSockets, Microservices, Event-Driven Architecture, System Design

EXPERIENCE

Software Engineer

Mar. 2026 – Present

CuneAI

Remote

- Shipped production **Node.js** / **TypeScript** services and **RESTful APIs** for an AI-assisted insurance submission platform used by brokers and underwriters.
- Owned the **commercial property submission pipeline**: PDF upload, classification, parallel category extraction, and coordination with a separate **Python ML** service (`/process/*` endpoints, retries, and structured outputs to **Azure Blob**).
- Extended extraction coverage for **prior policies** (`insurance.policy`) and **inspection reports**, normalizing classifier labels to stable DB types and keeping **manufactured homes** on a separate pipeline.
- Integrated **ML webhooks** and persistence (**MongoDB**) so document extraction status, artifacts (JSON/XLSX/markdown), and submission lifecycle stay consistent for the product UI.
- Partnered across frontend (**React** / **TypeScript**), ML, and infra in a remote startup setting—debugging end-to-end failures (e.g. extraction 500s, blob paths, API contracts) from logs through deployment.

Full Stack Developer

Sep. 2024 – Mar. 2026

Raizzify

Remote

- Engineered web applications using **React.js**, **Next.js**, and **TypeScript**, improving page load performance by **40%**.
- Designed **RESTful APIs** with Node.js and Express.js, delivering **5+ production features** including authentication and notifications.
- Managed global state across **15+ components** using Context API and Redux, reducing complexity by **35%**.
- Optimized frontend via React hooks in an **Agile** environment, reducing re-renders by **50%** and resolving **20+ UI issues**.

PROJECTS

Exchange System | *Node.js, TypeScript, Redis, WebSocket, Docker, TimescaleDB* | 

- Built a real-time crypto exchange capable of handling **10K+ orders/day** (load-tested) with microservices for API, matching engine, and WebSockets.
- Leveraged Redis Pub/Sub for async communication enabling **sub-100ms** order propagation across services.
- Integrated TimescaleDB to persist high-frequency trade data supporting time-series analytics for price, volume, and depth.
- Containerized **6+ services** with Docker, reducing environment setup time by **60%** and ensuring consistent deployments.

Email Scheduling & Delivery SaaS | *Node.js, TypeScript, BullMQ, Redis, PostgreSQL, Prisma, Next.js* | 

- Built a production-grade platform capable of processing **5K+ emails/day** (load-tested) using Redis-backed BullMQ with precise delayed delivery.
- Implemented **per-sender rate limiting** (**200+ emails/hour**), throttling, and auto-rescheduling to handle burst traffic.
- Designed **idempotent, restart-safe workers** with Redis locks guaranteeing exactly-once delivery across retries and crashes.
- Separated API and worker services for **horizontal scaling**; built a Gmail-like Next.js dashboard to monitor email statuses.

Event-Driven Notification System | *Node.js, TypeScript, Kafka, Redis, PostgreSQL, Docker* | 

- Built an event-driven system capable of processing **10K+ events/day** (load-tested) using Kafka-based microservices architecture.
- Implemented retries, dead-letter queues, and idempotent consumers, achieving **99%** reliable message delivery.
- Used Redis for caching, deduplication, and rate limiting, reducing duplicate notifications by **40%**.
- Persisted **100K+** records in PostgreSQL and containerized **5+ services** with Docker for consistent deployments.

AI Image Generation Pipeline | *n8n, Docker, REST APIs, CI/CD* | *Freelance, 2025*

- Built an **AI-driven image generation pipeline** using **n8n** with **95%+** prompt success reliability across **100+ user prompts**.
- Integrated backend with frontend delivering generated images in **near real-time** (**<3s**); optimized **CI/CD** with **Docker**, reducing latency by **30%**.

CERTIFICATIONS

Oracle Cloud Infrastructure Architect Associate – Oracle, 2026
